## PROFESSIONAL WORK

**Stokes Distributing -** [Github](#) | [Demo](#)
*Skills – Python - Django, JavaScript, Amazon S3, Bootstrap, SQL, Heroku*
- I am tasked with building a website for a beer distributer named Stokes Distributing to display all their products and their business along with implementing a lot of other features.
- Built using a Django (MVT pattern) back end to handle data, and a JavaScript and Bootstrap front end, to produce an entirely asynchronous website.
- Makes use of Encompass's external API to get all of the products and their information that Stokes carries.
- Integrated with Amazon's S3 cloud storage to store and serve all static and media files for this website.

## PERSONAL PROJECTS

**Mealz-Planner -** [Github](#) | [Demo](#)
*Skills – Python - Flask, Bootstrap, PostgreSQL, Heroku*
- A meal planner where you can look up different types of cuisines and their recipes. Then add the meal to your personal schedule for the week.
- Built using Python's Flask framework (MVC pattern) for the back end to handle data, and Bootstrap and CSS for the front end, to produce a clean looking mobile responsive application.
- Makes use of Spoonacular's external API to provide all the meal data.

**E-Commerce -** [Github](#) | [Demo](#)
*Skills – Python - Django, SQL, Bootstrap, Cloudinary, Heroku*
- An e-commerce website where you can buy and sell items through a bidding system and gives the user full control of the bidding process on their item.
- Full stack Django application, using Bootstrap and custom CSS on the front end to ensure a smooth user experience.
- Relatively complex relational database schema, making use of many different table relationships.
- Database is Integrated with Cloudinary's cloud platform to store and serve all the media files for the application.

**Movie-Ratings -** [Github](#) | [Demo](#)
*Skills – Python - Django, Bootstrap, Heroku*
- A movie ratings website where you can lookup different movies and see all their different ratings and a description of the movie.
- Uses Python's Django Framework for its full stack MVT pattern and harnesses Bootstrap for styling.
- Implements Python's BeatifulSoup module to scrape IMDB, Rotten Tomatoes and Yahoo's websites while adhering to every site's robts.txt for all the movie information to be displayed to the user.

## EMPLOYMENT HISTORY

**Lead Merchandiser –** Stokes Distributing                                    **May 2019 – Present**
- Promoted to Lead Merchandiser from being the weekend merchandiser.
- Responsible for training oncoming merchandiser's and communicating with route supervisors to get the product in the stores we need it in.
- Handles key accounts for the company while working and organizing numerous palettes of product to keep things flowing efficiently.
